Education

James Cook University Singapore | Bachelor of IT | GPA 5.85/7 **Jan 2025 - Mar 2027 expected**

Coursework: Advanced Software Engineering, Mobile Computing and Database Modelling.

EMAS Peer Tutor, May - Aug 2026: supported over 50 students in programming and IT courses.

BCA Academy Singapore | Diploma in Construction Engineering **Oct 2021 - Nov 2024**

Experience

Basilos Pte. Ltd. Singapore | AI Engineer Intern **Jul - Oct 2026**

- Compared five face-recognition approaches for identity drift in AI-generated model images; developed an InsightFace 1:1 consistency connector for face detection, alignment, embeddings and cosine similarity.
- Packaged offline Python / ONNX Runtime inference and Linux dependencies; verified model hashes. Returned JSON scores, thresholds and reason codes, with manual review for no-face, multiple-face and borderline results.
- Deployed internally to Workbench: all 23 identity comparisons were classified correctly and 30 repeat runs of one input succeeded; end-to-end P95 was 2.996 s. Documented exceptions and improvement items.
- Wrapped Potrace / VTracer in a local FastAPI interface for editable PNG-to-SVG conversion; ran 99 experiments and checked embedded bitmaps, path counts and visual quality. Recommended simple monochrome line art.

Selected Projects

ScamWise Campus Android App **May - Aug 2026**

Independent Developer | Kotlin, Jetpack Compose, Room, Retrofit | Demo | Code

- Built a five-screen campus scam-awareness app with 18 scenario-based training cases, URL threat checks and learning statistics.
- Separated UI state, business logic and data access using MVVM, Use Cases and Repositories; persisted learning records in Room and integrated Google Safe Browsing through Retrofit.
- Wrote 102 automated tests (79 unit, 23 UI) for validation, scoring, persistence and network errors. Removed exposed keys from source, cleaned Git history and rotated keys.

Smart Digital Product Recommendation Platform **May - Aug 2026**

Frontend Contributor / Product Owner | Team of 4 | JavaScript, Flask, PostgreSQL | Demo | Code

- Modified and debugged HTML/CSS/JavaScript, integrated Flask APIs and supported deployment as frontend contributor and PO; the team delivered recommendations across five product categories.
- Coordinated about 11,000 catalogue records, including about 2,000 eligible for recommendations; maintained 10 user stories and requirement-to-test mapping across three iterations, checking 12 team CI acceptance tests.

Skills

Development: Kotlin, Compose, Room, Retrofit; Python, FastAPI, Flask; JavaScript, SQL, PostgreSQL.

Engineering: MVVM, REST APIs, JUnit, Mockito, Espresso, Git, GitHub Actions; offline Linux deployment.
