JUNJIE CHU

Software Test Development | Automation and AI Testing | Class of 2027

Available full time from late December 2026 | Based in Singapore

+86 18752158616 | WeChat: cjj0908ya | English and Mandarin

2903442978@qq.com | chujunjie0908@gmail.com | GitHub | Portfolio

Education

James Cook University Singapore | Bachelor of IT | GPA 5.85/7 **Jan 2025 - Mar 2027 expected**

Coursework: Advanced Software Engineering, Mobile Computing and Database Modelling.

EMAS Peer Tutor, May - Aug 2026: supported over 50 students in programming and IT courses.

BCA Academy Singapore | Diploma in Construction Engineering **Oct 2021 - Nov 2024**

Experience

Basilos Pte. Ltd. Singapore | AI Engineer Intern **Jul - Oct 2026**

- Developed a Python connector to compare generated and reference face identities and tested it internally in Workbench. Compiled 54 records (23 identity comparisons and 31 scenario entries), retaining unverified items.
- Designed no-face, multiple-face, corrupt, low-resolution, occlusion and threshold-edge cases; checked JSON decisions, reason codes, null values and review states. Distinguished upload rejection from connector validation.
- All 23 identity comparisons were classified correctly; 30 repeat runs of one input succeeded and were checked for consistency. End-to-end P50/P95 were 2.691/2.996 s; recorded first-run and quality-message issues.
- Ran 99 PNG-to-SVG experiments, combining structural checks with visual review of editability. Identified path fragmentation in complex colour images and documented suitable uses and improvement items.

Selected Projects

ScamWise Campus Android App **May - Aug 2026**

Independent Developer | Kotlin, JUnit, Mockito, Espresso, Room | Demo | Code

- Built a five-screen scam-awareness app with 18 training cases, URL threat checks and learning statistics; designed 102 automated tests (79 unit, 23 UI) covering input, network, persistence and interactions.
- Tested Repositories, Use Cases and ViewModels with JUnit, Mockito and in-memory Room; mocked external services to verify StateFlow changes, scoring and statistics persistence.
- Used Espresso for interactions, invalid URLs and network errors. After finding an exposed API key in a release review, revoked and rotated it, cleaned source/build artefacts and rebuilt the app.

Smart Digital Product Recommendation Platform **May - Aug 2026**

Product Owner / Quality and Release | Team of 4 | GitHub Actions, Flask, PostgreSQL | Code

- Defined acceptance criteria for 10 user stories as PO; maintained requirement-implementation-test mapping and tracked changes and delivery scope across three iterations.
- Coordinated PR reviews and release checklists; checked GitHub Actions results against requirements and confirmed 12 team automated acceptance tests passed before release freeze. Contributed frontend/API integration.

Skills

JUnit, Mockito, Espresso; unit/UI/regression testing, mocking, boundary/error cases, JSON validation.

Kotlin, Python, SQL, Git, GitHub Actions; requirements traceability, issue records, P50/P95 analysis.
